Some noticeable candidates Electronic Index for the works of Tomas Aquino, prepared by Roberto Busa, S.J. from 1946 and completed in the 1970s. [10] Although originally stored on a single computer, a distributed CD-ROM version appeared in 1989. However, this work is sometimes omitted; Perhaps because the digitized text was a means of studying written texts and developing linguistic agreement, not as an edition published by itself. [11] In 2005, the index was published online. [12] Á ngela Ruiz Robles (1949) in 1949, ngela Ruiz Robles, an iron teacher, Spain, patented the meciao encyclopedia, or the mechanical encyclopedia, a mechanical device that operated in compressed air where the text and graphics were contained On reels that users carried on rotating axes. His idea was to create a device that diminished the number of books his students carried to school. The final device was planned to include audio recordings, a magnifying glass, a calculator and an electric light for night reading. [13] His device was never put into production, but a prototype is kept at the National Museum of Science and Technology in a Coru e a. [14] Douglas Engelbart and Andries Van Dam (1960) Alternatively, some historians consider the electronic books started in the early 1960s, with the NLS project led by Douglas Engelbart at the Stanford Research Institute (SRI) and the hypertext editing system and Fress project, led by Andries Van Dam at Brown University. [15] [16] [17] Fress' documents were excited on IBM's mainframes and were structure-oriented rather than line-oriented; They were dynamically formatted for different users, displayed hardware, window sizes and so on, in addition to having automated tables, indices and so on. All of these systems also provided hyperlinks, graphics andresources. It is generally thought that van dam coined the term "electronic book."
