Schema branchement antenne tnt repartiteur

This solution can be applied abroad as in Belgium or Switzerland and of course it is possible to connect a TNT antenna from the local country all on the same cable, but still changing the only incoming sockets to SAT/TER. Here to begin with synopsis sketches with explanations for capturing and distributing the national TNT in France, if it is covered by a transmitter... Example bisat, for 4 sockets In all these cases you need both coaxial descent lines (genre 17 Vatec/Patec), which lead to your single input socket, as well as head-level outputs. FM radio) for 4 users: Here we have entered the field of full multi-distribution S AT+TER , with an n of ultra-wideband (ULB) outputs compatible with 2 to 16 sockets. Note that the terrestrial input may lead to a hand coupler to attach e.g. FM (VHF II) or a 2 x UHF coupler, or a selective, to attach a second UHF antenna, case edges. However, there are some TNT TVs equipped with a built-in DVB/S-S2 tuner and with a common interface for the PC/MCA card reader module, to track and decrypt Bis Tv or CanalSat (in Viaccess) via satellite, as well as all clear channels of any Re satellite Copy that. TNT reception chains in shadow area, alternative satellite Fransat + TNT foreign for border guards. Single or double Sat, low TNT reception. The installation of a B.I.S (Satellite Intermediate Band) line amplifier may be required. The satellite antenna, of parabolic appearance, can be simple (1 head = 1 satellite) to more elaborate, (2, 3 or even 4 heads) this does not change anything in the principles and rules of distribution. Distribution of type composition. See also the technical explanations under the respective headings, for the connoisseurs: SCHEMES DISTRIBUTION TV, SATELLITE BIS-C + TERRESTRE PARTOUT Matrice, commutateur mini-collectif 3 x SAT (ex: Hot-Bird, Atlantic Bird 3, Astra 1) + TNT (+ even. Toutes les prises d'arriv e d'Acoplantes SAT/TER proposent le signal de la TNT, mais 1 seule, g n rale au salon, le signal de la TV SAT en plus. T alimentation + 5V distante (TV salon) L'antenne comporte un pr ampli int Agr  d'o le terme " antenne amplifi e " Sch ma 5. Le dossier mini-distribution ne sch matise non plus pas les installations uniquement SAT. (les bouquets gratuits : Fransat, Tntsat, et les bouquets payants: C+/ CanalSat, Bis TV, TV d'Orange etc.) avec t tes LNB universelles   multi-sorties (2, 4 ou 8) pour 1 quelconque satellite au choix, puisque cela ne soul ve pas de d veloppements compl mentaires, vu la simplicit  On rappelle le plus important, il faut imp rativement respecter les niveaux d'attaque, de sortie et d'entr e finale donn e en dB V, en se rappelant que c'est le seul C/BER (Viterbi   l'antenne s che) qui exprime la qualit  du signal et donc la faisabilit , ou pas, de la r ception en num rique terrestre. Les r glages, les gains d'amplification et les niveaux de sortie dB V des commutateurs multidistribution (Multiswitch, ou Multischalter ou multicommutateur ou commutateur collectif... Chaque terminaison de ligne est dot e d'une simple prise. Double sat / r ception TNT ais e, jusqu'   4 prises Nb : sans r partiteur le niveau TNT de r ception, d' s => 67 dB V pour obtenir le niveau de distribution final cibl , (standard) , 60 dB V. En mode TNT, on propose des variantes, avec pr amplificateurs si la TNT se r oit plus difficilement. avec l'offre Radio. - Variante au moyen d' une classique t te universelle avec injecteur, stop courant et tonallit  en amont du coupleur (pour conserver le 13 V, 0 kHz n cessaires) Sch ma 6. Enfin, il est rappel  que dans les zones d'ombres TNT (noitanemil  cov  105V tasoisV : TAS + RET esirp 1 te RET sesirp 4 tcapmoc eludom noitubirtsid), tiot, rum(leiciftra uo), erbra (lerutan elcatsbo nu snad "epat" elobarap al is fuas, noitpoc r ed em  Aldorp ed sap tmemisauq a no etilletas nE, elleudivichn noitcurtsnoc emu'd seck  ip setner ffid snad se  t s). 61  uqsu ...eriov(sesirp 8  uqsuj tmemerar sulp, sesirp 4  uqsu, jar n n ne ,retropmoc tueb iug elleudividni nosiam emu snad, siof al   etilletas rap VT al te, T.N.T etid, ertserreT euqir Amun vt al tnatpac ,VT noitubirtsid ed uaes r-inim uo ,e vtr evitcelloc emnetna'd noitallatsni'd egatnom nu resila r te erdnerpmoc ruop s  tucifid seuqleug zevuorp  suov ,tnemennoba snas alec te ,ser gnari  selanoitanretni uo selanoitan sen h c sertua + selacol sen h c sed + janoig AR 3 ecnarF ,selanoiger snoitats 22 sed sulp ne siam ,stutarg xuanoitn V for preparation  , if not insufficient TNT SCH  MA 2. Inspired by the part of the plan N   5 Part of the Earth (high left) Conclusion  This file dedicated to the installation   and connection of the facility   and the branch SAT and TER Antenna, obviously did not request it. Exhaustive, but the principles don't change. Please note that the established domestic facilities for FM radio distribution are   rare, as so-called "FM" programs are sometimes available on SAT. It is advisable (if possible) to distribute the TNT in addition to the sat , which allows in some cases to record a string and see again. Regarding the reception   the canalsat bouquet channels, you will miss a few. But first a reminder on arrivals of necessary arrivals, according to the choice   n: - TV   (single arrival, 1 universal output) For terrestrial TV (VHF-UHF) or for satellite TV (BIS): - TV connector coupling offers of 1 arrival and 2 filtered outputs, 1 only for the TER and the other for the SAT. Of course, we can add to the preparation   works with a different  . Sch    MA 3. Revision   distribution   n, level, p  losses, profit on private collective mini-distribution   + value of tensi  n: SCH    7: Versi  n with amplifier AMP BIS + PREPLAINT UHF Scheme 8: Installation   SAT / TNT comprising a line BIS, LB or ULB AMP: In a typical installation, with a drop line of 10 m (  17 VATEC / PATC), the power requirement can be estimated at 6 or 7 dB. In addition to SAT (2150 MHz) compared   TNT (860 MHz), on the top, to find at the bottom an equivalent level. Overview, but for the reception   on TNT MAs diffUeli: Sch  n 11: Principle for the BISAT standard, for 5 in 8 catches: SCH    Ma 12: Ditto, but for TNT reception's difficult (add preview   n previous) 13: Fransat represent in simplified B.I.S and in a single type dorsal distribution of cable with resoding and tutorial deceased. See the linked records and specifications of these modules . General description of the basic installation. 1 SAT + TNT, up to 4 jacks: SCH S MASURE 10. PRESENTATION OF SECTOR 220/240 V ON THE SITE (ETIC .) Sch  The dashboard, in blue is compatible, in purple, not (or in red and green for foreign television): http://media.canal-plus.com/file/54/7/192547.pdf in these 2 cases, either In BIS-S or C, you need an external SD or HD modulator and labeled, "FRANSAT" or "TNTSAT / CHANNEL READY", because to this day, without tuner SD (MPEG 2) or HD (MPEG 4), integrated satellite tuner, do not work on French satellite deals without subscription. It is observed that it is not possible to operate a single satellite modulator simultaneously in another room, even with a plug attached, through this type of distribution. and to receive international satellite channels (and other French and French speakers) by Parabola, through satellites. Sites of ASTRA 1 and Hot-Bird, or Astra 2, or Hispasat, Turksat, Nilesat, etc. . The forum building, therefore, invites you to see details. How to think about your distribution architecture, depending on the convenience of the passage, existing or planning in a project to build a pavilion, and with which materials reinforce it, which will also give an ideal in the CO-T of the realization. NB: - Depending on the importance of the output level on the satellite head, and the final level distributed (at least 45 dB  /V), taking into account the losses of distribution, (up to 25 dB), a (insert venting a gain adapted bis line amp.) are particularly in the model . Know that the TNT (is DVB-T) is always and only in ground mode, never in It broadcasts you on TV SAT (in standard DVB-S or even S2 si HD) all the same channels called TNT, but with nuances of offers. It does not matter the service sought, as the decisive and sensitive element in the installation   be the gain of conversion of or heads-Inb. For the 8 sockets is increased, at the top, of the order of 10 dB. Switching arrays   have 1, (monosat) 2, 3 or 4 full sat  lile B.I.S inputs, and are always equipped with a VHF-UHF input with eventual telepowering   n (on/off) for a possible UHF preamp that works with the same voltage, or compatible, with the supplied... Schemes FOR THE RECEPTION N TV ALL TNT + SAT PARTIAL Scheme 1. SAT mono or multi, low reception   n TNT, (never from distributors in the lines...) Example monosat   3n for 2 takes: The same applies to monobloc heads of 6" (Astra 1 + Hot-Bird) available in 2 or 4 outputs. Scheme 9. Nb: There are 3 dedicated output dissociator sockets (+  FM ) in the case of mounting a terrestrial radio antenna in VHF II band. (88/108 Mhz) It is clear that if a single TV plug in the house, the schemes do not include a distributor or diverter. Balance with 4 or 8-way distributor. Additional amplification 3n B.I.S for, in particular, low-performance user cable antenna renewals.
